SLIDE NOTE · 01 · OPENING AND TITLE

[Opening mix begins automatically]

Bentley Stancil.
Betty Culler Stock.
Nolan Wells.

Two came home.
One did not.

Good morning.
Thank you for being here.

Today, we will consider how information can move
without losing the person inside the story.

SLIDE NOTE · 02 · WHEN MINUTES MATTER

A person is more than a category.

The next person needs useful context,
delivered with dignity.

Care needs a clear handoff.
Who is this person?
Who knows them?
Who owns the next step?

Today we will practice clear descriptions,
agreed boundaries, and accountable handoffs.

SLIDE NOTE · 03 · WHY NOW

People rely on phones and local networks.
Coverage is not everywhere.

When phones die,
when there is no WiFi in a valley,
in the mountains, the woods, or a cave,
the platform still reaches.

This is a design aim, not a promise of coverage everywhere.

Veteran perspectives came through more than one hundred
individual conversations and gatherings.

Findings belong to the group.

SLIDE NOTE · 04 · WHERE WE START, AND WHO IS CLOSEST

Our one launch focus is dementia and Alzheimer’s.
Caregivers and memory-care settings are closest to the work.

Autism is a governed pathway.
So are people who are disoriented or in distress
and cannot communicate.

Human trafficking is separate.
Survivor-centered guidance is essential.

SLIDE NOTE · 05 · THE FULL REACH

The horizon is broad, but not every pathway is live.

Clinical and life populations include autism, PTSD,
Parkinson’s, ALS, Down syndrome, seizures,
non-verbal individuals, and people with visual
or hearing impairments.

Everyday life includes children, pets, service animals,
and K-9.

Work and duty include agriculture, mining, construction,
military members, and professional athletes.

Water, sport, and recreation include swim, surfers, helmets,
cruise, and fishing vessels.

Response and wildland include search and rescue,
forest rangers, and correctional facilities.

Aviation includes pilots and passengers,
and the aspiration to locate and geofence a black box
that may be out of reach.

SLIDE NOTE · 06 · THE HUMAN-CENTERED RESPONSE GAP

A person is encountered.
The person may not be able to explain the whole story.

Context can be fragmented.
Identity, authorized details, and trusted contacts
may be scattered.

Ownership can be unclear.
Without a named next step, information can stall.

Make information move without losing human dignity.

SLIDE NOTE · 07 · WHAT THE MARKET LEFT OPEN

The question is not only, which gadget?

A single-purpose tool may address only one part
of a larger response.

A disconnected workflow can split access, context,
and handoffs.

A network-dependent approach can be limited
where phones or WiFi are unavailable.

The opening is a coordinated value stream: person,
authorized context, accountable handoff.

This is a platform direction, not current integration.

SLIDE NOTE · 08 · WATCH OWL™ RESPONSE ARCHITECTURE

The network is the point.
The connection and workflow are the product.

Watch Owl is a value stream platform,
not a watch and not a device.

The wristband is the initial entry point.
The platform connects to any device.

Silent Check-In.
Caregiver Alert.
Emergency Escalation.

The wristband rendering is a concept.
Final production design may vary.

SLIDE NOTE · 09 · THE DAILY WORKFLOW IS THE PRODUCT

The app holder owns the lock.
A PIN, fingerprint, or password only they know.

Each caregiver has their own access.

No shared logins.
Access is accountable.

One primary caregiver holds emergency override.
That person may block access if a caregiver becomes a danger,
if a caregiver passes away,
or if the primary caregiver is in danger.

Nomex and Kevlar provide fire, water, and cut resistance.
Nanites are future reinforcement, ahead of us, not in hand.

Durability serves the connection.

SLIDE NOTE · 10 · RESPONSIBLE PHASED DEVELOPMENT

Listen. Scope. Define consent, roles, and safeguards.

Prototype the workflow with caregivers and settings.

Test usability. Refine the response architecture.

Regulatory category entry begins in Phase Four,
not earlier.

This is not diagnostic or treatment technology.

SLIDE NOTE · 11 · MAKING THE MISSION OUTLIVE ITS FOUNDER

A mission cannot depend on one person’s memory.

Document roles, permissions, decisions, and handoffs.

Question assumptions before claims travel.

Stewardship builds accountability beyond one person.

Protect the person.
Strengthen the relationship.
Improve the response.
Preserve dignity.

SLIDE NOTE · 12 · TEAM, ADVISORS AND CREDENTIALS

Darlene Williams-Prades brings experience in military service,
FEMA disaster management, EEOC mediation, DHS, and OPM.

Her background also includes healthcare facilities,

emergency response, contracting, and leadership.

Advisors are listed by name and discipline only.
Their disciplines challenge and inform the work.

This is not a claim of clinical validation.

SLIDE NOTE · 13 · SCENARIO 1: PUBLIC CONTACT RESPONSE GAP

A person is approached in a public setting.

What information supports respectful first contact?
Who may share it?
Who owns the next step?

ASK THE ROOM, 60 SECONDS.

[Pause.]

ASK THE ROOM, THEN WAIT FOR ANSWERS.

Listen for authorization, trusted contact, and ownership.

SLIDE NOTE · 14 · SCENARIO 2: MEMORY-CARE EXIT AND WANDERING

A resident is no longer where staff expect them to be.

Who notices?
What information is authorized and useful?
Who makes the next contact?

ASK THE ROOM, 60 SECONDS.

[Pause.]

ASK THE ROOM, THEN WAIT FOR ANSWERS.

Existing procedures remain in place during testing.

SLIDE NOTE · 15 · SCENARIO 3: CAREGIVER ALERT AND DEMENTIA RISK

A caregiver receives a signal and must decide what it means.

What boundary was agreed?
Who is authorized to act?
How does the loop close?

ASK THE ROOM, 60 SECONDS.

[Pause.]

ASK THE ROOM, THEN WAIT FOR ANSWERS.

Keep dignity and caregiver accountability in view.

SLIDE NOTE · 16 · VALIDATED TRACTION

Thirty thousand plus survey signals.

Fifty volunteered participants in Rocky Mount,
North Carolina.

Four proposed pilot periods in 2027.

January through March.
April through June.
July through September.
October through December.

Signals invite validation. They do not prove performance.

SLIDE NOTE · 17 · A RESPONSIBLE PILOT BEGINS WITH LISTENING

A pilot is a learning partnership.

A designated liaison.
Eligible volunteers with consent.
Onboarding and training.

Facilities retain existing response procedures during testing.

Validate the workflow.
Learn with care partners.
Refine responsibly.

SLIDE NOTE · 18 · VALIDATE + PILOT

Thirty thousand plus survey signals.

Fifty volunteered participants in Rocky Mount,
North Carolina.

Four proposed 2027 pilot periods.

The single ask is Validate + Pilot.

Built to reach responders, not just an app.

[Pause. Let the room breathe.]

SLIDE NOTE · 19 · CONTACT

Wisdom Watch Owl™.
wisdomwatchowl.com

superiorloveforever@gmail.com

Thank you.

Let the work continue with humility, care,
and accountability.

[Leave space to breathe at the close.]
